Both Etx and Ctx are composed of one A subunit and five identical B subunits. The A subunit CC is responsible for toxicity, while the B subunits (EtxB and Ctx are CC ribosyltransferase activity, while the B subunits (EtxB and CtxB) CC ribosyltransferase activity, while the B subunits (EtxB and CtxB) CC facilitate the entry of subunit A into the host cell via the binding and CC cross-linking of GM-1 receptors. Although GM-1 binding is responsible CC for some of the effects of Etx and Ctx, it has been found that certain CC through GM-1 binding. The peptides of the invention are fragments of the beta-4-alpha-2 loop of EtxB and/or CtxB, exerting the same effects as normal EtxB and CtxB subunits, except that they do not bind or cross link CC GM-1. They may be used in medicine as an immunomodulator or adjuvant. CC They may also be used as an inhibitor for toxin-induced diarrhoea. CC for treating, preventing and/or modulating a disease associated with an CC composition of a composition com

The Bordetella strains are particularly engineered to express the cholera toxin B subunit (this sequence). The promoters used in the constructs are selected from the Bordetella pertussis tox, fha promoters or the high molecular weight (hmw) outer membrane promoter of non typable Haemophilus influenzae; leaders used in the constructs are selected from the cholera toxin B leader (CTB-L), the pertussis toxin subunit S1 leader (S1-L) and the pertussin pertactin leader (PRN-L); and genes used in the constructs are selected from a novel synthetic cholera toxin B gene (ctb) and the hmw1 and hmw2 genes of Haemophilus influenzae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant constructs comprising a promoter functional in Bordetella operatively linked to a heterologous gene or a non-Bordetella leader sequence for secretion of a gene product which may or may not be of Bordetella origin, can be used for the expression in Bordetella of enzymes, antigens, immunogens, allergens, enzyme inhibitors, hormones, lymphokines, immunoglobulins or their

0,

A transgenic plant comprising or expressing a DNA sequence encoding an immunogenic agent can be be used as an orral vaccine for animals. The vaccine is administered by the oral consumption of the plant and provides the first known functional method for immunising animals

using transgenic plants, where the plants express bacterial antigens

adjuvants.

AAW06606 is a mature cholera toxin B subunit (CTB)/heat labile enterotoxin B subunit (LTB) hybrid molecule. In mature CTB protein, certain amino acids (aa) were replaced with corresponding aa from heat-labile enterotoxin B subunit (LTB). The specific amino acid substitutions impart LTB-specific epitope characteristics to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric

This is the LT-B Escherichia coli toxin subunit and its coding sequence was used in the construction of such a transgenic plant. The immunogenic agent preferably comprises the LT-B or CT-B (cholera toxin B subunit) or optionally LT-A or CT-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Heat labile; tolerant; stable; hybrid; cholera toxin B subunit; heat labile enterotoxin B subunit; LTB; vaccine; immunisation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW06606 standard; Protein; 103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunogenic mature CTB. The hybrid molecules have increased cross-reactivity and are suitable for a broad spectrum vaccine protect against enterotoxigenic illness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a
AAW06607 is a mature cholera toxin B subunit (CTB)/heat labile enterotoxin B subunit (LTB) hybrid molecule. In mature CTB protein, certain amino acids (aa) were replaced with corresponding aa from heat-labile enterotoxin B subunit (LTB). The specific amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and vomiting, in humans and animals.
                                                                                                                                                                      Heat-labile enterotoxin B sub-unit and cholera toxin B sub-unit hybrid protein - opt. fused to immunogenic sequence for use in vaccines against enterotoxin-induced illness
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           02-MAY-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Heat labile; tolerant; stable; hybrid; cholera toxin B subunit; heat labile enterotoxin B subunit; LTB; vaccine; immunisation; immunogen; antigen; broad spectrum; cross reactive; diarrhoea;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cholera toxin B subunit/heat labile enterotoxin B subunit hybrid.

                                                          This is the amino acid sequence or the country control as the method of the invention involving the use of nontoxic subunits as an effective adjuvant in coadministration of an antigen to birds and animals. In addition to the use of the toxin as an mucosal adjuvant, it also provides a vaccine comprising the toxin, an immunogenic amount of an antigen, and a pharmaceutically acceptable carrier. The toxin can be used with single/multiple vaccines, and it enables the possibility for commercial mucosal adjuvants for use in humans, since these are more effective and safer than vaccines
                                                                                                                                                                                                                                                                                                                                                                                       New mutant cholera toxin selected from subunits/derivatives - effective as an with an antigen to birds and mammals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cholera
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protect against enterotoxigenic illness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a vaccine to prevent, enterotoxin induced illness, e.g. diarrhoea
     Sequence

                                                                                  The invention relates to a recombinant AB5B subunit protein comprising at least one mutation, where the mutation alters the number of amino acid residues available for chemical modification as compared to a wild type AB5B subunit protein, and where the recombinant protein retains an effective target ligand binding affinity. A recombinant AB5B subunit protein such as cholera toxin B protein (CTB) can be specifically covalently linked at lysines or cysteines to an immunogen or vaccine. Recombinant mutant CTB (CTB) can be used in the treatment of autolimmune diseases e.g. rheumatoid arthritis, encephalomyelitis (or other neuron
                          demyelinating diseases) and diabetes. The rCTB or other B subunits invention can also be used to induce tolerance to infection, e.g. parasitic infection. The present sequence represents a CTB variant protein, NCBI GenBank No. GI 1421511.
                                                                                                                                                                                                                                                                                 Recombinant AB5B subunit protein comprising a mutation that alters the number residues available for chemical modification, useful for covalently linking to an immunogen or vaccine which can be used for

                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a recombinant AB5B subunit protein comprising at least one mutation, where the mutation alters the number of amino acid residues available for chemical modification as compared to a wild type AB5B subunit protein, and where the recombinant protein retains an effective target ligand binding affinity. A recombinant AB5B subunit protein such as cholera toxin B protein (CTB) can be specifically covalently linked at lysines or cysteines to an immunogen or vaccine. Recombinant mutant CTB (rCTB) can be used in the treatment of autoimmune diseases e.g. rheumatoid arthritis, encephalomyelitis (or other neuron demyelinating diseases) and diabetes. The rCTB or other B subunits of the invention can also be used to induce tolerance to infection, e.g. parasitic infection. The present sequence represents a CTB variant protein, NCBI GenBank No. GI 1421525 (Ogawa 41 R35D).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Recombinant AB5B subunit protein comprising a mutation that alters number residues available for chemical modification, useful for covalently linking to an immunogen or vaccine which can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunogen; autoimmune disease; neuron demyelinating disease; rCTB;

                                                                                                                                                                     least one mutation, where the mutation alters the number of amino acid residues available for chemical modification as compared to a wild type AB5B subunit protein, and where the recombinant protein retains an effective target ligand binding affinity. A recombinant AB5B subunit protein such as cholera toxin B protein (CTB) can be specifically covalently linked at lysines or cysteines to an immunogen or vaccine. Recombinant mutant CTB (TCB) can be used in the treatment of autoimmune diseases e.g. rheumatoid arthritis, encephalomyelitis (or other neuron demyelinating diseases) and diabetes. The rCTB or other B subunits of the invention can also be used to induce tolerance to infection, e.g. parasitic infection. The present sequence represents a CTB variant protein, NCBI GenBank No. GI 2781121 (Ogawa 41).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant AB5B subunit protein comprising a mutation that alters the number residues available for chemical modification, useful for covalently linking to an immunogen or vaccine which can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AB5B subunit protein; mutation; recombinant; cholera toxin B; CTB; immunogen; autoimmune disease; neuron demyelinating disease; rCTB; infection; parasitic; immunosuppressive; antiarthritic; antirheuma antidiabetic; neuroprotective; vaccine; variant.
                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a recombinant AB5B subunit protein comprising least one mutation, where the mutation alters the number of amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a recombinant AB5B subunit protein comprising at least one mutation, where the mutation alters the number of amino acid residues available for chemical modification as compared to a wild type AB5B subunit protein, and where the recombinant protein retains an effective target ligand binding affinity. A recombinant AB5B subunit protein such as cholera toxin B protein (CTB) can be specifically covalently linked at lysines or cysteines to an immunogen or vaccine. Recombinant mutant CTB (CTB) can be used in the treatment of autoimmune diseases e.g. rheumatoid arthritis, encephalomyelitis (or other neuron demyelinating diseases) and diabetes. The CTB or other B subunits of the invention can also be used to induce tolerance to infection, e.g. parasitic infection. The present sequence represents a variant of the E. coli heat labile toxin B (LTB) protein.

                                                                              AAW06605 is the full (including the signal peptide) length cholera toxin B subunit (CTB), this sequence is described as unpublished in the specification. The mature CTB protein was used to create hybrid mutants, in which certain amino acids (aa) of CTB were replaced with corresponding as from heat-labile enterotoxin B subunit (LTB), see AAW06606 and AAW06607. The specific amino acid substitutions impart LTB-specific epitope characteristics to immunogenic mature CTB. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             from Plasmodium berghei. Pref. the fusion gene is inserted into attenuated Salmonella enteriditis under the left promoter control of lambda. Such bacteria can multiply in the host without causing disease disorder and express CS that will induce a protective immune response against malaria and can be used in vaccines. Such vaccines can be
                                                                                                                                                                                                                                                                                                                                                                                          Heat-labile enterotoxin B sub-unit and cholera toxin B sub-unit hybrid protein - opt. fused to immunogenic sequence for use in vaccines against enterotoxin-induced illness
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N-PSDB; AAT43575

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                     This is the amino acid sequence of Escherichia coli beta-subunit of heat labile enteritoxin (LTB). It is used in the method of the invention to create fusion proteins which are useful as vaccinating immunogens. The fusion proteins are useful in vaccines, specifically where the antigenic peptide is an inhibin fragment for increasing the fertility of an animal (by increasing levels of follicle stimulating hormone (FSH) or production of sperm or ova), but more generally for inducing an immune response against the antigenic peptide. Vaccines are particularly administered orally, e.g. fusion protein is expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid encoding fusion of antigenic peptide and enterotoxin sub-unit - useful as vaccinating immunogen, partic for increasing animal fertility by inducing antibodies against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used to treat, or in a vaccine to prevent, enterotoxin-induced illness, e.g. diarrhoea and vomiting, in humans and animals.

                                                                                                                                                                                                                                                                                                                   This synthetic Escherichia coli heat-labile toxin (LT) B subunit (LT-B) is encoded by a plant-codon optimized CDNA. The CDNA sequence contains plant-preferred codons and eliminates sequence motifs associated with plant-codon graph of the second codon is changed from ANT encoding the spurious mRNA processing. The second codon is changed from ANT encoding CD Asn to GTG encoding Val, in order to create a NCOI restriction site at the 5' end. Novel polynucleotides encode a mutant LT-A polypeptide or a CC mutant Vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide, which have reduced enzyme activity as compared to the wild-type LT-A or CC CT-A polypeptide and where at least one of the codons is altered to a CC plant preferred codon. The polynucleotide further comprises a nucleic cald sequence encoding LT B subunit (LT-B) or a CT B subunit (CT-B). The CC polynucleotides are useful for the transformation of plant cells for the prolynucleotides in transgenic plants to produce edible vaccines, especially coral vaccines in transgenic plants for the prophylactic or therapeutic coral content against E. coli or V. cholerae. The mutant polypeptides are

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      length: 2000000000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        length:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query

GENERAL INFORMATION:

APPLICANT: Holmgren, Jan

APPLICANT: Lebens, Michael R.

APPLICANT: Lebens, Michael R.

TITLE OF INVENTION: HYBRID MOLECULES BETWEEEN HEAT-LABILE

TITLE OF INVENTION: ENTEROTOXIN AND CHOLERA TOXIN B SUBUNITS

FILE REFERENCE: 3846/00758

CURRENT APPLICATION NUMBER: US/08/952,337

CURRENT FILING DATE: 1998-01-05

EARLIER APPLICATION NUMBER: PCT/SE96/00570

EARLIER APPLICATION NUMBER: SE 9501682-0

EARLIER APPLICATION NUMBER: SE 9501682-0
